## **NEW RISLONE® POWDER RADIATOR STOP LEAK MAKES IT EASY TO PROTECT COOLING SYSTEMS**

**Holly, Mich. (June 8, 2010)** — Rislone® introduces a powder version of its popular Radiator Stop Leak. This new product uses the same active ingredients as Rislone Liquid Radiator Stop Leak but the powder comes in a small, easy-to-use tube.

Like its liquid counterpart, Rislone Powder Radiator Stop Leak (p/n 31170) is designed to permanently seal leaks in plastic, aluminum and metal radiators, heater cores, blocks, heads, gaskets and freeze plugs, including internal, external and coolant-to-oil leaks. These tiny particles will not clog heater cores. In fact, the Big Three car manufacturers mandate that any product installed in a vehicle's cooling system must pass through a 24 gauge mesh screen. Rislone products are the one of the few stop leaks to pass this test and to be approved by the OEMs.

In addition to stopping leaks, Rislone Powder Radiator Stop Leak also protects the cooling system. It inhibits the formation of rust and scale, neutralizes pH imbalance, prevents electrolysis and lubricates the water pump seal. One package treats systems up to 11 litres.

"Because every vehicle owner and service technician is different, we've developed a wide range of formulations for our Radiator Stop Leak products," explains Clay Parks, Rislone vice president of development. "The Powder Radiator Stop Leak is a great choice for smaller vehicles. It's also very convenient to use and to store, as it fits neatly in a glove compartment or toolbox."

Rislone Powder Radiator Stop Leak is safe for any cooling system using conventional green (silicate-based) and extended life red/orange or yellow (OAT) antifreeze. It is added directly to the radiator, with no flushing required. For most vehicles, leaks stop in only a few minutes.

Rislone Powder Radiator Stop Leak is available to distribution in case packs of seven blister cards. All Rislone products are made in the U.S.A. Labeling includes directions in both English and French, and is compliant with Canadian labeling requirements.

For more information about Rislone Powder Radiator Stop Leak, visit the Web site at **www.rislone.ca** or call (800) 521-7475. The Web site offers a wealth of information, including product descriptions, FAQs, material safety data sheets (MSDS), technical details, directions, testimonials, a store locator and company information. The site can be viewed in English or French.

Rislone Inc. offers a full line of premium automotive chemicals to the Canadian market. Its flagship product, Rislone Engine Treatment, has been North America's best-selling engine treatment for more than 80 years. Based in Holly, Michigan, U.S.A., Rislone is an ISO 9001:2000 certified company.
